A short demo deck — Marp on

Prakash Poudel Sharma · Ruby Nepal · 2026

Why a deck in the repo?

- Markdown is the source of truth.
- The site theme renders it; no external slide tool to chase.
- `pnpm presentations:build` produces HTML + PDF.
- Generated files are committed so deploys stay fast.

How it fits the site

1. Editable source: `src/content/presentations/<slug>.md`
2. Theme: `src/styles/marp-theme.css` (mirrors design tokens)
3. Output: `public/presentations/<slug>/index.html` and `slides.pdf`
4. Listing: `/presentations/`

A code slide

```
# A tiny Ruby aside, in keeping with the reference deck.  
def greet(name)  
  "Namaste, #{name}"  
end  
  
puts greet("Kathmandu")
```

The theme keeps code blocks calm; the accent only appears under headings and on emphasis.

What this deck is not

- Not a port of any third-party deck.
- Not a marketing landing page in disguise.
- Not wired into `pnpm build` — generation is explicit.

Thanks
